

Plan A: upcoming videos

A list of videos that the client is currently working on. The list includes a name of the video and what stage of development the video is in (for example, filming or editing). Videos are deleted from this database after they have been finished and uploaded to YouTube.

This uses two database tables:

Table 1 "Videos" (fields marked * are required):

1. *VidID – a unique ID number for each video
2. *Title – the title of the video
3. StatusID – a single digit number. The current progress of the video, the values for this will be taken from the second database table since there are many steps in creating a video.
4. Teaser – a brief written teaser of what the video is about
5. Conf – short for confidential, can be either "0" or "1." some videos must be kept secret until they are published to YouTube. If this field is marked "1" then the title field on the website would just say "Top secret video."

Table 2 "StatusCategory":

1. Name – the name for each stage of video production. The stages include: advertising negotiations, research, script writing, filming, and editing.
2. StatusID – a single digit number for each video production stage
