Elliott Warren

Design Journal

- This site uses Foundation 6.0; its documentation is found here:
    - http://foundation.zurb.com/sites/docs/
    - My (and your) CSS modifications are in the app.css file
    - There is a foundation text page to test if the foundation files are working.
- all pages except for future_videos.php requires you to log in, if you are not logged in the site will silently redirect you to future_videos.php.
- The navigation bar should match the rest of the site, but since I didn't have access to the website's existing materials I created a mock-up nav bar.
- I also couldn't save the dark grey background image off the site so I just used a white background instead.
- I left debug code in the following pages, they are left in php comments:
    - future_videos_form.php
    - future_videos_delete.php
    - future_videos_edit.php
- I left a php debug page in the main folder.
